ODC Series Passive Infrared (PIR) Occupancy Sensors

DESCRIPTION
The Leviton ODC Series combines line voltage occupancy sensors and photocells into a self-contained unit. The integrated design alleviates the need for separate power pack and occupancy sensor wiring making it a low-cost, efficient energy solution for new construction and retrofits. For true Daylight Harvesting applications, integrated photocells provide consistent Daylight Design Levels by actively switching the connected load(s) ON and OFF in response to available natural light to maximize energy savings. Vacancy timers continually analyze and adjust to changing conditions using the latest microprocessor-based technology to optimize performance. Auto ON/ Auto OFF automatically turns lights ON and keeps them ON when occupancy is detected and automatically turns lights OFF when the space is vacant or unoccupied. Wire terminals allow for simple connection to a line-voltage circuit and are ideal for existing buildings with limited access to wiring and new construction.

APPLICATIONS
- Daylight Harvesting
- CA Title 20 Compliant Occupancy Sensor
- Auto-ON/Auto-OFF
- Manual-ON/Auto-OFF

FEATURES
- Uses industry-exclusive digital (4 element) PIR circuitry for fewer false triggers from unwanted sources such as HVAC systems. A Fresnel lens establishes dozens of detection zones requiring the heat source to move from one zone to another to trigger the sensor.
- Auto-Adapting: Time delay and sensitivity are continually adjusted to occupancy pattern of use.
- Configurable for Manual ON/Auto OFF or Auto ON/Auto OFF
- Vacancy Sensing Time Outs:
  - Delayed OFF Timer: The sensor will turn lights OFF if no motion is detected after a specified time
  - Exclusive Walk-through Feature: Provides increased energy savings by not leaving the lights ON for an extended period after only momentary occupancy
- False Detection Timer: (M/T) The PIR scans for movement and shuts lights off after 31 minutes preventing false triggers from HVAC systems
- Output short circuit protection
- Industry-exclusive self-configuring local manual switch input: Momentary or maintained switches are supported
- Presentation Mode feature for slide or film presentations allows push buttons to turn lights OFF and keep them OFF while the room is occupied
- Adjustable Time Delay: 30s, 5min, 10min, 20min, 30min
- Test Mode for simplified commissioning
- Manual Switch and Emergency Override are Class 1 and Class 2 circuits. Class 2 circuits provided for flexibility
- Industry-exclusive “fail-safe” circuitry: In the event of product failure, Return-to-Closed feature causes the relay to default ON which eliminates life safety concerns
- Industry-exclusive H.I.S. (High Inrush Stability) technology designed to handle today’s high inrush electronic ballast loads and offer unmatched durability and service
PRODUCT DATA

FEATURES
• Robust and reliable mechanically held 8A latching relay provides dependability and robust performance for all load types and provides energy savings over electronically held relays
• Field of View: Units from 450 to 1500 square feet available
• Lenses are easily replaceable and color-coded blue (high-density) and red (mid-range) for contractors and end-users to easily identify lenses from the ground
• Visual LED indicators for all states:
  • Red - Blinks when infrared is detecting motion and during photocell manual calibration; solid during device malfunction
  • Yellow - Blinks during test mode; solid with emergency/BMS input
  • Blue - Blinking light indicates photocell override

RATINGS AND TESTING
• Factory-calibrated, zero-crossing circuitry for extended life of the relay
• Tested to exceed 1 million switching cycles under standard loads
• Multiple compliance and regulatory UL testing - consult factory for details
• Passed rigorous NEMA 410 testing for electronic ballast rating
• BMS Input/Emergency Override: UL 924 listed for Emergency and Egress lighting control

PHOTOCELL FEATURES
• Daylight Harvesting Applications:
  • Auto-Calibration (Automatic Daylight Calibration): Photocell intelligently measures light levels to determine optimal daylight design levels for closed loop applications
  • Closed loop: Photocell detects total photometric light from daylight or electric sources in the space
  • Open loop: Photocell detects daylight or electric light only; requires manual calibration
• Adjustable daylight design levels: Normal (OFF), Manual (ON/OFF) and Auto Calibration
  • Blue - Blinking light indicates photocell override
• Integrated photocell tested to less than 1 Fc accuracy
• Open and closed loop photocell included

INSTALLATION
• Easy installation into junction boxes with Leviton-exclusive screw guides, coasters and terminal blocks
• Front cover snaps on and off for ease of installation

PHOTOCELL PLACEMENT*

Open Loop Application - Angled Light Pipe

Closed Loop Application - Flat Light Pipe

*May require more than one occupancy sensor for total room coverage
PRODUCT DATA

FIELD OF VIEWS

- ODC04-IDW (High Density Lens - Blue)
- Multi-Range Lens (Included with PIR Model - Red)
- ODC15-IDW (Extended Range Lens - Black)

DIMENSIONS

INSTALLATION

Sensors conveniently mount to a standard 4" x 4" square or octagon electrical box per NEC standards.
